

# Systech Site Diary App

The Systech Site Diary App is being used by main contractors and subcontractors to improve their project record keeping and team performance

The app is configured specifically for your project, giving users a set of relevant questions to respond to each day. Users send their responses to a secure database which consolidates the information into a single project report that is emailed daily to an agreed circulation list.

- Project specific, relevant questions for the users to respond to
- Users aware of the key issues they need to look out for
- Record keeping co-ordinated between members of the project team
- Daily contemporary project record
- Improved project team communication
- Photos can be included
- Record to support additional entitlements and defend criticisms
- Management aware if a daily report is not prepared
- Records stored in a secure database
- Suitable for projects of any size

*"The app has established a discipline to our site record keeping and gives me the confidence that project records are being maintained"*

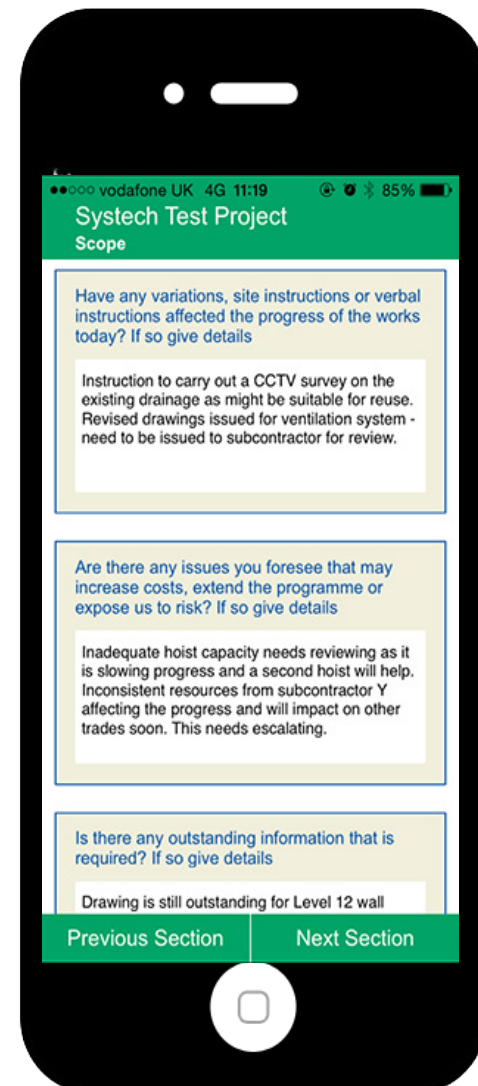

*"The app has improved communication between staff on the project"*

*"Staff using the app have become more commercially aware"*

*"I can view the daily app reports from wherever I am, even whilst on holiday!"*

*"The reports give me the heads up on the key activities from the previous day and an action list to follow up"*

*"It helps to have an agreed set of questions to respond to each day rather than individuals having to decide what is important"*
