

Systech Site Diary App

A revolutionary improvement to project record keeping and team performance

Systech has produced a mobile phone app which will revolutionise the preparation of site records and make project record keeping really simple. The app is available to download from the App Store and Google Play and is being used on live projects by main contractors and subcontractors.

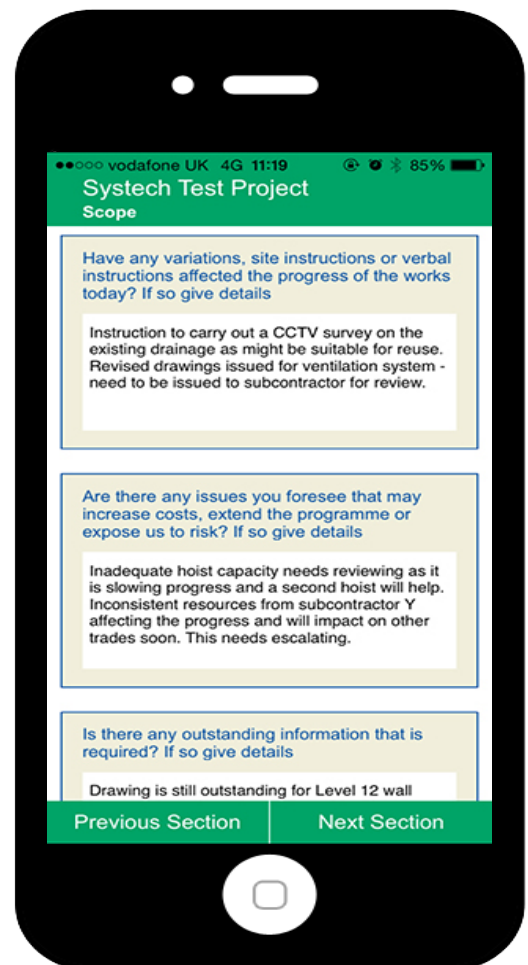

The app is a complimentary addition to our services. Our consultants will use their expertise to specifically configure the app for a project, providing advice on the questions and fields to include for example:

- Site Access
- % completions
- Impediments to progress
- Key dates
- Material deliveries
- Verbal instructions
- Early warnings

The app will ensure that a daily contemporary report of irrefutable weight and credibility is produced by staff with direct knowledge of the events. The report will also be stored in a database.

The managing office can view the reports on a daily basis allowing prompt response to actions and the instruction of any remedial measures. It will also be immediately apparent if reports are not being prepared or if the level of detail is insufficient.

Concerns over lost records [where is that laptop?], or indeed whether records were maintained in the first place, will be eliminated and the need to prepare easily challenged after the event records a thing of the past.

"The app has established a discipline to our site record keeping"

"The app has improved communication between staff on the project"

"Staff using the app have become more commercially aware"
