

Risk Management

The identification, evaluation and management of reputational, contractual, cost, programme and legal risks over the lifetime of a project.

We are experienced in the identification, definition, quantification and control of risks and appreciate that risk management is an ongoing process over the lifetime of a project.

Where risks exist there will also be opportunities and we will identify these to our clients.

Our services are particularly relevant on major projects with onerous risk management requirements.

North Anna Nuclear Power Plant

ITER

Singapore MRT Downtown Line

Services we provide include:

- Risk management planning
- Process and procedures
